

Overview

*Elite provides Operational Efficiency Services that are driven from our domain expertise, our experienced and innovative staff and our in-house best practice approaches. We supply services across all client domains and lead in areas such as:

Operational Excellence Diagnostics – We provide a quick and efficient way to analyse a client operation and compare to best practice across the value chain

Business Process Management – We are a leading company in installing BPM programmes across industries and deployment of BPM automation solutions

Operational Strategy – We help our clients define best practice operational strategy and implement them

Performance Optimisation – Years of experience across the Sector allow us to help our clients improve their operational performance including production performance and cost optimisation

Process Optimisation – We assist our clients in designing/improving processes to take advantage of and leverage value from new capabilities

Operational Efficiency

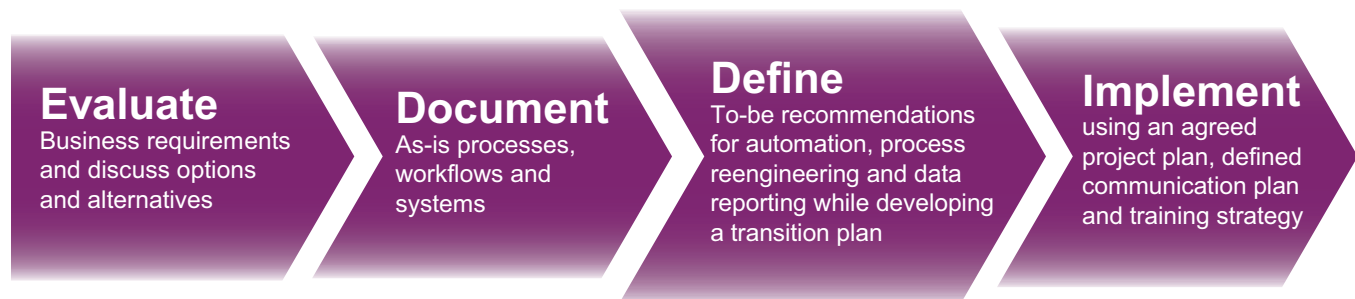

Achieving the maximum output of an operation and delivering the optimum efficiency of your people and assets is the goal of any organisation and cannot be delivered without a strong union between business and IT.

Elite understands that Operational Efficiency is not achieved through a single programme of work and has to be embedded as a continuous improvement activity. Our consultants not only have specific knowledge of Operational Efficiency best practice, but also understand the interactions across the entire Exploration and Production landscape.

Operational Efficiency Management

Achieving the highest value from your operation requires the analysis and evaluation of both your internal and external operational processes. Recommendations on improvements must then be tracked and mapped against specific key performance indicators within your business model. This process can be resource intensive and complex, often leading to an acceptance of sub-optimal results.

Elite offers a modular, four phased approach to efficiency management (shown below). Each work stream is customised to Your Business needs and includes integrated training and coaching to ensure long term adoption.

Change Management

Elite understands that effective change management comes through the use of standardised methodologies and procedures that give the business owners clear visibility of the change and its relative risk/impact to the project or programme.

Our Consultants understand how to plan, execute and monitor the life cycle of change to ensure that the impact is expected and delivered in accordance to the original design. Whether the change is technical, process or behavioural focused we have the experience and expertise to ensure the desired outcome is always achieved.
